demo

Aitwork is a B2B platform focused on the use of Artificial Intelligence in business. The platform enables the administrator to create multiple accounts for company employees. Finally, users will be able to connect and use AI with an experience similar to ChatGPT.

Aitwork allows the company to choose the templates available for Text to Text - Text to speech - Speech to text - Text to Image - Image to Text.

As founder, I developed the entire platform.

I learned to manipulate many APIs in the AI field. I also worked on chunking docx and pdf documents to store them as vectors for knn search.

Self-taught and curious, I'm highly motivated to constantly develop my IT skills. I enjoy automating processes and embarking on new personal projects. I like to challenge myself in areas I'm not familiar with, in order to surpass myself.
